Description

When going to Admin mods (tiki-mods.php) on a new install, make it report the directory name when the mods directory hasn't been created or lacks correct permissions.

The error reported asks to run ./setup.sh but is not specific about the directory affected here. This would be helpful to manually fix the individual directory instead of running ./setup.sh (which may not be possible in some situations like FTP installs).

Solution

Around line 24, changethe line after:
if (!is_writable($mods_dir)) {

to:
$smarty->assign('msg', tra("$mods_dir has wrong permissions or could not be created. You need to run setup$ $smarty->display("error.tpl");

I submitted a bug about the setup.sh script "helping" me on my Debian server by defaulting to the user www-data despite what I put on the command line. Definitely needs work

Bernard Sfez / Tiki Specialist 11 Oct 21 11:30 GMT-0000

As per Tiki23, Tiki "Mods" are obsolete (since Tiki 19).
Tiki now uses "Packages" instead. Please visit https://doc.tiki.org/Packages to find out more.
