Description
If you export the items from any tracker, either from the main tracker admin screens or using the trackerfilter plugin, then whilst the spreadsheet is created it has no data other than the tracker field headers and the following text ie an error message:

Fatal error: Call to a member function getField() on a non-object in /deleted_path/lib/core/Tracker/Field/DynamicList.php on line 144

This happens when one of the fields in the tracker is a "Dynamic Items List" (although it might conceivably happen with other fields - not exhaustively tested)

This a regression as this works fine in Tiki 12.x

Sorry - this was a broken tracker, although the error message could have been a bit more informative !!
