Description
FF26.0
after reaching the step 'install' in the installer, I was asked in a never ending loop for my db
credentials

my work-around solution was to add
$_SESSION['accessible'] = true;
to
db\local.php

and then the install went on

Do you have cookies or javascript disabled? Or any other "blocker" type add-ons installed?
Just worked fine here for me on 14.x latest and Firefox 40.0.3

JS on, cookies on. Bitdefender might interfere.
