Description

According to r31226 (7/12/10, by killianeibel):

“

MOD Wiki pages can be viewed at a specific version, using the &version or &date URL parameter. Files included in pages with the FILE plugin correspond to the specified version. This feature must be enabled with 'feature_wiki_use_date'.

However, I can't get this feature to work with Tiki14 or Tiki12 or Tiki9 (with or without revision approval). It seems as if important pieces of code are missing. Did this ever worked?
