Description

After I upgraded a site from 10.x to 12.x, and cleared caches, I got this error when attempting to see or login at the site:

12.x: Fatal error: Unsupported operand types in lib/setup/prefs.php on line 406

using 12.x svn (r53316)

The site uses LDAP, so maybe some pref in LDAP settings interferes somewhere?

our server uses PHP Version 5.3.5-1ubuntu7.2ppa1~lucid1

Solution

I haven't seen this issue anymore for long in our servers with ldap, nir anywhere else, so closing and tagging as outdated.

I presume this just went away after some cache flushing etc, please recategorise. 12 and 13 were released without further reports like this.

p.s. i think blockers should always have a show instance
