Description

When a wikipage uses a namespace, one cannot add a comment due that the "add comment" button does not show up.

When renaming that page to not use a namespace, it works.

Example:

"MyNamespace:_MyPage" does not show the add comment button.

renaming to

"MyNamespace_MyPage" does show the add comment button.

or

"MyPage" does show the add comment button.

Effects 14.x Trunk as of 18.1.2015.

For testing i used the standard default bootstrap template.

Workaround

This problem shows up when using the default namespace separator ':_:'.

A workaroud is to use a namespace separator, that does not contain characters that are not usable

in an url like. So a working example would be '--'.

Maybe we should change the default namespace separator to something else and validate that no ':' is used.
