Description

In the admin-modules page module position dropdown, for example, the selector has an inline 'style="width: 827px;" that causes the selector to extend past the right side of the containing div. In Firefox there's no problem, but with Opera (which now uses the Webkit renderer) and IE 11 the selector extends beyond the right margin of its containing div.

Solution

we added max-width: 100% rule on the .chosen-single container

0000000

```
.chosen-container-single { max-width: 100%; }
```

Advantages:

1. It does not use the !important to override the element width
2. It still allows to specify width and limits it to max 100% so it works in Opera/IE
