Description
Updated from 9.3 to 13.1, now article modules do not display filtered by category when article assigned to the specified category.

We use module articles for listing articles. Articles are categorized in different categories. Listing is in the right column next to the article and list the titles of articles from the same category as displayed article.

In version 13.1 do not function the parametr Category in visibility settings of module.
If the module is configured as shown in figures, the module is not displayed next to the article. In previous version this parameter works fine.

Solution
The module displays fine when a wiki page is categorized in the specified category. The module should display also if an article is categorized.
