Description
For invalid Tiki URLs ending in .php (or .html, etc.), instead of a nice 404-type message, there is this: "No route found. Please see http://dev.tiki.org/url+Rewriting+Revamp". This is ok for a dev site (looks like a message to a developer), but isn't appropriate for a production site. In Tiki 13, there is something a little familiar, though not very nice: "404 Not Found - nginx". Is there some way to have a nice, styled page, that looks like part of the site and not a server message?

Solution
Ideally the page-not-found message page would look like part of the site, would use the site's theme, etc. and

could have content editable by the site staff, probably including the branding, a search form, a site map, etc.

Workaround
There is a workaround to prevent this from happening, I found out a few days ago:
Go to Control Panels > General > Tab Navigation
Deselect the parameter "On permission denied, display login module''
Edit parameter *Send to URL* /login

Added a workaround that fixes it for me.
