Description
    Use Firefox to visit http://zukakakina.com/tiki-listpages.php for an example. If Tablesorter is turned on, div class="table-responsive" will be out of position, offset far to the right.

    The div containing the wide table is positioned correctly in Opera 12, Recent Opera (webkit), and IE11. But in Firefox (latest version), this div (.table-responsive) is positioned so that just the left edge of the table is inside the div and the rest of the table extends to the right, under the right column of the page.

    Another table with tablesorter applied, on tiki-adminusers.php, doesn't show this problem in Firefox.

Solution
    Fixed with r54558
