### Description

We (geoff and xavi) were considering the benefits of creating a Profile out of a use case of trackers, plugin list and custom search. To achieve such a goal, a pre-liminary step is to implement a tiki site in a show.t.o instance here in dev.t.o, which is similar to a custom setup that Geoff has for some project. And then, convert that setup into a profile in profiles.t.o

More to come. And feel free to join us if you have some ideas or spare time to contribute to this project! 😊

(you will learn how to create a profile out of a tiki site)
