Related-to
    - ✪ Several issues with dropdowns and tablesorter for tracker data

Description
    This used to work in the past at some point with some Tiki 12.x, according to the documentation
    written by lindon.
    But it fails for me as soon as I set "server=y" in the params of Plugin TrackerList.

    I've set up (modified) the profile Barter_Market so that the nice Tablesorter feature can be
    demonstrated (with server=n so far, of course) for the list of available wants.

    This also allows to easily reproduce a failing environment (replace it to be server=y, etc). It has also
    been reproduced in a show.t.o instance attached to this bug report.

    Filter for antything, and it won't work. Change param server=y to server=n and it will work again
    (except for the filtering on a tracker field "items_list": tracker_wants_offers_same_user).

In Tiki 12.x, you can filter for the field items_list tracker_wants_offers_same_user with no problems (provided server=n of course), but you can't filter on the status (which does work nicely in 14.x).

This tablesorter thing looks promising indeed! Thanks lindon!!!

Solution

Thanks xavi - various commits (between r54937 and r54984) have been made in 14x and merged to trunk and backported to 13x and 14x to allow for proper sorting and filtering when server =y. Status, categories, and date field types can now be sorted properly. Showing the status field was also throwing the filtering and sorting off by 1 column since the status field is handled differently within tiki - this has also been fixed.
