Description

I've been Argument Variables as described in [http://doc.tiki.org/Tiki14#Wiki\\_Argument\\_Variables](http://doc.tiki.org/Tiki14#Wiki_Argument_Variables), using TikiWiki v14b and found a bug, it only shows correct information when previewing the version of the page, if you see the page itself, argument variables won't show:

Example not working of viewing the page:

Example working previewing the page:

Solution

gezza said:

i took a shot at this at r55602, can you check again?

the logics for currentVersionApproval seems wrong to me, but maybe I dont get the concept anyway, let me know if things got better or worse 😊

---

update: r55602 was not a good one, retry with r55605

I'm assuming this has been fixed and am closing this report. Please re-open if any issues.

## Comments

**cr0vax** 02 Apr 15 11:13 GMT-0000

Attached a demo of the bug

**Xavier de Pedro** 02 Apr 15 12:31 GMT-0000

I can't play that swf, it seems.

Can you please indicate in clear text the steps to reproduce the issue in your show.t.o instance?

**cr0vax** 08 Apr 15 14:04 GMT-0000

- 1 . Open instance at URL <http://crvax-11720-5612.show.tikiwiki.org/tiki-index.php>
- 2 . login username: admin password: 12345
- 3 . Click Home
- 4 . On left menu click Wiki>List Pages
- 5 . Click on Falgged Revision Test Page
- 6 . You can see that and won't show
- 7 . Click History
- 8 . Click on action "v" to preview the page
- 9 . You can see that and show the correct information

Resuming, it only shows correct information if the GET variable preview=1 is present, otherwise it won't show the information correctly

**luciash d' being**  08 Apr 15 14:15 GMT-0000

Argument Variables (except some special ones) are only available when supplied by GET (POST or COOKIE — not sure), so no wonder they do not appear when page saved, as those two vars are only passed in URL while editing and previewing the page. Not a bug IMHO...

**luciash d' being**  08 Apr 15 14:27 GMT-0000

Ah, misunderstood, I see it now! Yes, it seems weird if it shows only in History > View but not in normal page view:

<http://crvax-11720-5612.show.tikiwiki.org/tiki-pagehistory.php?page=Falgged+Revision+Test+Page&preview=1>

I have set perms on that page so now you can check even without logging in as admin.

Torsten Fabricius 😊 08 Apr 15 14:54 GMT-0000

Hi, not sure if I understand right, but I see the variables working well on the HomePage (view mode) and I see the code in edit mode.

Whazda problem?

Lucias d' being ☐♂ 08 Apr 15 15:20 GMT-0000

It has nothing to do with Edit. It is in the History.

The problem is instead of:

```
{ {lastVersion} }=1
{ {lastAuthor} }=admin
{ {lastModif} }=2015-04-02 12:47
{ {lastApprovedVersion} }=1
{ {lastApprover} }=admin
{ {lastApprover} }=admin
{ {currentVersion} }=1
{ {currentVersionApprover} }=
{ {currentVersionApproval} }=
{ {currentVersionApproved} }=no
```

It should display:

```
{ {lastVersion} }=1
{ {lastAuthor} }=admin
{ {lastModif} }=2015-04-02 12:47
{ {lastApprovedVersion} }=1
{ {lastApprover} }=admin
{ {lastApprover} }=admin
{ {currentVersion} }=1
{ {currentVersionApprover} }=admin
{ {currentVersionApproval} }=2015-04-02 12:59
{ {currentVersionApproved} }=yes
```

... when you View the page.

( as in the

<http://crvax-11720-5612.show.tikiwiki.org/tiki-pagehistory.php?page=Falgged+Revision+Test+Page&preview=1> )

cr0vax 09 Apr 15 12:01 GMT-0000

Yes, that's it!

**gezza** 29 May 15 20:18 GMT-0000

i took a shot at this at r55602, can you check again?  
the logics for currentVersionApproval seems wrong to me, but maybe I dont get the concept

anyway, let me know if things got better or worse 😊

**luciash d' being**  12 Nov 15 04:31 GMT-0000

Yes, gezza, thanks. I svn upped the show instance and it is fixed.
