Description
Hi, I am afraid, that Intertiki is not working anymore, when Tiki 14 or pre-15 trunk is acting as master.

I have two environments, where Intertiki worked previously, but not anymore.

Due to the http-password it is not possible to connect to the show instance via Intertiki. But I configured the site as example, if you want to check it.

Now I will create a example setup on my server and add the access date here lateron.

If that my anticipation would be true, I consider this as a blocker, not only because we depend on Intertiki on the community websites.

Torsten

Solution
Error found and reported by Torsten and Nelson, finally fixed by JonnyB (thx Jonny!):

Mainly removed

include_once('XML/RPC.php');
in several files

Tikiwiki-cvs/svn SF.net SVN: tikiwiki:55368 branches/14.x
Tikiwiki-cvs/svn SF.net SVN: tikiwiki:55372 trunk

Workaround
The problem appears to be because of the line:
require_once('XML/Server.php');

This causes a fatal error when PHP cannot find the required file in the path. What baffles me is that this problem seems to exist for Torsten and me (new Tiki install) even in TIki 12. How then can tiki.org login work?

Anyway, commenting out this line seems fine to me since autoloading of classes should work right? Should we remove this line?

Also related to this is a a new bug we discovered, filing separately for that one.
