Description

My website has a navigation menu set up using a tiki structure. It is set to use non-bootstrap menus for this. When I hover over the menu, there are potentially multiple levels of the menu that can pop out.

Since Tiki 14.x, only one level of the menu will pop out. The menu options that have more levels below them even retain the ::after arrow showing that it can pop out, except, when you hover over it, the second menu level does not pop out.

I have attached a screenshot to show what my set up looks like.

Solution

This was fixed by the SVN r55165 (2015-04-20) commit by Anbumania. The CSS overflow:visible property was missing for the lower menu levels.

Hi

Can you confirm you have these settings in the menu module?

```
bootstrap=n; css=y
```

Are you using the latest Tiki14 revision? there were ome changes since Tiki14beta.

taylordustin 17 Apr 15 15:57 GMT-0000

Yes, I can confirm that I have those settings. Also, I have the latest source code from Tiki currently. It's as if it only wants the first level of menus to open. What else can I try?

gezza 20 Apr 15 17:38 GMT-0000

I looked at the show instane, strangely if I assign the same module to the right column, the sublevels appear (not nicely, but at least they are visible) will try to find out why, might be a css issue

realized, that the snapshot is from trunk, not Tiki14

Oh! You're right... I can replicate the bug in a Tiki14 instance if you'd like. I am still experiencing the issue.

This bug has been fixed, as far as I know. There was a CSS overflow:visible property missing on the lower-level menu flyouts/dropdowns. The fix was committed to branch 14 so please test with current code. (The problem cleared up at themes.tiki.org and other sites.)

taylordustin 21 Apr

Perfect. I pulled the new code, and the fix appears to be working correctly.
Thanks very much!
