Description
    jQuery fails to load if minify is enabled and a JS CDN is in use.

    Go to http://jonnybradley-8515-5634.show.tikiwiki.org/tiki-admin.php?page=performance (login is admin 12345) and try different CDN settings. Curiously on my production server both Google and jQuery CDN settings fail, but on this show instance the Google one works - odd

Solution
    Fixed in r55218 (wolfganga)

Workaround
    Disable JS CDN

Importance
    9

Easy to solve?

i think wolfganga fixed this too in trunk when he rewrote the minify javascript, maybe that can help

Jonny Bradley 17 Apr 15 15:51 GMT-0000

From some brief testing and looking at the code in those commits i felt that as it was quite a complete redesign of the minifying and javascript injection code it would be unwise to backport it into 14.x now (after the beta). This worked ok in 13.x so is a regression and a small fix should be possible (i hope)

WolfgangA 17 Apr 15 16:17 GMT-0000

Hi Jonny,

really the reason for the "complete redesign of the minifying and javascript injection code" was partially based on that the CDNs did not work properly. Given that trunk works (at least for me) for 7+ weeks now (in terms of JS minification) , we should reconsider a backport.

The other option would be a sort of hack, defining those (few) places where cdns come into place and create a "special handling" for them. However, there are already "special handlings" all over the place, which makes it uneasy (thus the the redesign).

WolfgangA 25 Apr 15 13:38 GMT-0000

Fixed in r55218. Note: This fix is not compatible with Trunk.
