Right now PluginJQ documentation (https://doc.tiki.org/PluginJq) is very helpful, and I made a profile in 12.x to manage the conditional display of some fields in forms. http://profiles.tiki.org/Conditional_Display_in_Forms

But in 14.x the required syntax seems to be different, and I don't get it right: http://profiles.tiki.org/Conditional_Display_in_Forms_14

u: admin
p: 12345

When selecting Case A or Case B in the radio button, all fields are shown, but no bg color for all the shown fields below the radio button.

When selecting Case A in the radio button, still some labels from fields for Case B are shown (text area)
