

from "Casa" alias page name.

```
(alias(Casa))
```

Therefore, you can access to the homepage also with:

<http://xavidp-1553-5652.show.tikiwiki.org/tiki-index.php?page=Casa>

However, if you open that wiki page for edition with "Inline wiki editor", make some changes, and saved the page through the inline wiki editor (click again at that button that you used to open the inline editor), then the alias link is gone. If you edit the page with the standard wiki plain text editor, you will see that the code at the bottom is replaced with a standard wiki link pointing to "HomePage" and using "Casa" as label.

```
((HomePage|Casa))
```
