- ✖ [upgrade all databases in a multitiki installation in a single go with console.php](#)

Description

Right now, if you have a multitiki installation with 10 sites, and you want to rebuild the unified search index for them all, you have to run 10 times the command with the "--site=" para adapted to each case.

However, when you run setup.sh, by default setup.sh runs for all sites in a multitiki installation.

It would be nice if console.php had the chance (by default or not) to be run once for all sites in that multitiki installation at once

with some param like "--site=all":

```
php console.php d:u --site=all
```

Workaround

Use

```
sh ./doc/devtools/sqlupgrade.sh
```

which has been fixed in r58881 to work with Multitiki's in Tiki 12+ and also allowing full domain names (with dots) as multitiki instances.
