Description

In tables with header text used as a sorting anchor, the UI text can get changed from the text string in the .tpl file to something else. In the case of tiki-edit_quiz, "Quiz can be repeated" (the correct interface string, gets changed to "canRepeat", which is the input name. (So "canRepeat" displays as the table heading text.)

Solution

fixing column heading texts with r55600 and r55601

I'm guessing this issue has been fixed and am closing this report. Please re-open if any issues.
