Description
    There seems to be an issue with the Antibot not working, It asks to type the code backwards but
    always says what you type doesn't match.
    To reproduce, enable user registration and try to register.

    I've done some debugging and haven't been able to figure out how to fix it. In Word.php in
    Zend/Captcha/ the getWord() function doesn't seem to be able to grab the "word" variable from the
    session. (Line 294)

Solution
    It was an issue with the dumb captcha.

    The new Zend framework dropped a render function for the dumb captcha so had to adjust
    captchalib accordingly.

    Tested after changes and it worked

Workaround
    Only work around is to use recaptcha or not use a captcha at all.

Hi Patrick
It sounds like you are missing the GD library in your PHP build. Have a look at tiki-check.php and see if anything's flagged as missing on there?

However, the "dumb" captcha should work as a fall back and did so last time i used it (was a while ago though)
