Description
    Plugin TrackerToggle doesn't display the hidden field if attempting to change value in a previously saved itemId

    I followed the documentation found here:
    https://doc.tiki.org/PluginTrackerToggle
    with this type of syntax in a pretty tracker page:

    {TRACKER(trackerId="1" fields="2:5:10:11" showtitle="n" showdesc="n" showfieldsdesc="y" showmandatory="y" showstatus="y" wiki="Template1")}{TRACKER} {trackertoggle fieldId="5" value=1 visible="y" id="condiv"}

    And the wiki page Template1 contains:

Field 2: {$f_2} Field 5: {$f_5} {DIV(id=condiv)}Field 10: {$f_10}{DIV} Field11: {$f_11}

---

and the field is hidden by default, however it doesn't get displayed when the radio button gets the value "1" (yes) when visiting a previously saved item; e.g., with the url like: http://xavi-9794-5689.show.tikiwiki.org/tiki-index.php?page=HomePage&itemId=3

(please note that this itemId3 has field5 stored with value 0 (case A). That's why even if you click (at item edition time) to the second value of the radio button (value 1 - case 😎, nothing is shown (because field5 has value 0 stored or in the session or something).

---

See it reproduced here:
http://xavi-9794-5689.show.tikiwiki.org/tiki-index.php?page=HomePage&itemId=3

p: 12345

Solution

Solution:
Get the TrackerToggle plugin to listen to the edition in the form on the fly, and not just working based on saved values when serving the page.
