Description
: Tracker field 'Date and Time (Date Picker)' gets current time as default value in mobile mode (12.x) even if set pref to 'None'.

: This implies that if users only saves a few fields of the tracker form, and doesn't plan to set value for the date and time (date picker) fields, they will get stored current date value, even if that can be a wrong value (it should be empty).

: Reproduced here:
: http://xavi-9794-5689.show.tikiwiki.org/tiki-index.php?page=HomePage
: u: admin
: p: 12345

: See field 14, in standard desktop-computer mode, and compare with Mobile mode (siwtch with link in module in left column)

Importance
: 7

Turns out to be quite a stubborn one - spent an hour on it but can't get it to work, and in 14 it fails completely if feature_jquery_ui is disabled.
Will try again another day if i can... sorry
