Attempt to insert an item, selecting some date at "My date field".

This worked in 12.x as expected (no complain when selecting dropdown fields in a tracker date and time field).

See it working in this equivalent 12.x instance:

Solution

r56175 but i'm not sure if i should really remove the class "date" from these select dropdowns instead - or re-class them as datetime or something else?

thanks jonny, fixed!. Keep the class as-is, maybe, unless anybody else pushes for a class change?
