### Description

When using an article topic image (png/jpg) it shows (tiki-view\_articles.php) in recent Firefox (40.x) and Internet Explorer (11.x), but not in recent Google Chrome (45.x). This is tested on windows7/8.x. The fault is also experienced on Android 5.1/Chrome (updated Sony Xperia Z3). The fault is experienced with tiki 14.1svn rev 56180 and demo.tiki.org/14.x

The biggest consequence is that article topic images may not be shown on recent Android/Chrome. This might be a severe fault if topic images is used to communicate article importance.

I expected the article topic image to show ;-)

The obvious workaround is to use a different browser, but that is maybe not the first an Android user will try.

It's probably easy to fix since it is related to how Google Chrome (fails to) interpret the image, while FF and IE does.

## Solution

Fixed by SVN commit 56200. A known Bootstrap problem for Chrome. I don't see how it was fixed (we're using the latest Bootstrap version) but I added a CSS rule and changed some classes around the image, so hope this solves the problem without side effects.

Looks like there are some bootstrap changes that cause the div containing those images to have no width, so some bootstrap expert is needed to fix it i'm afraid (i looked, couldn't work it out, template's too messy, sorry)

Needs to have bootstrap grid classes added, of the `img width:100%` removing afaics...

Gary Cunningham-Lee 17 Sep 15 05:55 GMT-0000

Seems to be related to this: <https://github.com/twbs/bootstrap/issues/16120> (combination of a.thumbnail

inside div.media-left).

If I remove the thumbnail class on the anchor tag around the image, then it displays. I don't really understand yet how the bug was resolved by Bootstrap, as we're using the latest version, 3.3.5. Still checking on the best solution.
