

Same issue in a 12.x LTS site, or with a 14.x site (both updated recently through svn)

Once that java security setting was changed to Medium, I was able to see the jCapture applet as usual, once I accepted the popup window indicating that it was a security risk to accept to run that java application, etc. (this will frighten most users, imo)

FYI, Java console says:

```
Missing Application-Name manifest attribute for:  
http://myproductionserver.org/vendor/jcapture-applet/jcapture-applet/lib/jcapture.jar
```
