Description

Currently, the Banning System interface (tiki-admin_banning.php) only allows IPv4-format addresses to be specified for matching purposes.

I believe this should be updated when convenient to enable IPv6 addresses to be specified, either as a new field ("IPv6 Regex Matching", with the existing field renamed to "IPv4 Regex Matching") or as a single field that allows both.

It appears from documentation that support for IPv6 in System Administration tables was part of the [Tiki 8 release](#). Assuming I understand that correctly, this request should only require interface changes to be made.
