- ✖ [12.x: Countries list is not alphabetically sorted any more](#)

Description

When adding or editing sites through the Directory Site Admin interface (tiki-directory\_admin\_sites.php), the "Country" field is not sorted (on my install, it starts with "Sudan", ends with "Niger" and goes all over the place inbetween).

Linked to [BWL#4954](#) as the issue is similar (although that one relates to a different interface, and has since been fixed and closed).

---

Edit 2015-11-22: No demonstration at this time due to [BWL#5768](#); pending that, it should be confirmable through any 14.x install with the Directory feature enabled, a user logged in that has Directory Admin privileges, and navigating to the tiki-directory\_admin\_sites.php page.

---

Edit 2015-11-23: As BWL#5768 is now closed, I have been able to demonstrate this on show.t.o. Just using the 'admin' user is fine to test, per the note above. On this instance, the "Country" field starts with "Finland" and ends with "Malawi" in the Directory Site Admin interface.

---

Edit 2015-11-30: Am attempting to test a possible fix (courtesy lindon) using a trunk instance on show.t.o; the instance may be destroyed and re-created a few times until I get one that works.

---

Edit 2015-12-15: Have a successfully set up v14.2svn instance on show.t.o. The bug persists in this instance.

#### Workaround

Spend a little time browsing the list to find the country you want 😊.

## Comments

**lindon** 28 Nov 15 23:35 GMT-0000

Can you try in trunk now? [r56821](#) may fix it but I'm not able to easily recreate since the sorting works fine for me (although I see it doesn't on the show instance and on the doc site.)

**aexoxea** 30 Nov 15 08:01 GMT-0000

Hi lindon,

I've just tried to do a trunk demo on show.t.o; unfortunately the setup didn't complete ("Your Tiki is not completely installed because Composer has not been run to fetch package dependencies. You need to run sh setup.sh from the command line.") and so I haven't been able to test.

I don't currently have another mechanism available to test from trunk, so I'll need to try this again later. Of course, I will post here as and when things develop.

Thanks, aexoxea.

Hi lindon,

Got a chance to follow this up today, and managed to get a working instance on show.t.o. The instance is v14.2svn.

It's not clear from SF if this fix is in 14.x branch from trunk or not, so if not, let me know and I'll try again with a trunk instance. In any event, the bug persists in this v14.2svn instance.

Thanks, aexoxea.
