Description

Make File gallery tag image files in Tiki according to exif tags and such, and the other way round too.

For instance, we could tag files in shotwell, and upload them to tiki, to have all tags recognized and shown in tiki also.

"Shotwell 0.8 can write metadata to photo files on the fly - to enable this, select the option "Write tags, titles and other metadata to photo files" in the preferences dialog. Once this is selected, Shotwell will update metadata in photo files as soon as you tag them."

Ideally, tags added in Tiki to image files should be added to image exif metadata (and similar), so that when images are exported from tiki they should carry their own tags inside. At least, allow that optionally.
