Description

I believe that tiki_p_wiki_attach_files (without other permissions given) may not work, I seem to have tested thoroughly (about 5 -6 hours over the course of a week), though easily could have missed something.

I tested under a variety of situations (various permissions - global, category, object) on several sites / themes and unless tiki_p_edit is also allowed simultaneously, this function does not work. Even if tiki_p_wiki_admin_attachments is allowed, it still does not work (users just don't see the 'choose file / attachment' option)

It would seem excessive to have to give wiki page edit rights (or admin attachments) to upload an attachment to a page (to promote collaborative work) - for example, you put a Tracker or TrackerList on a page where you would like to allow exchanging of files, there is no need to risk having someone change the page contents (accidentally or on purpose).

Thanks,
Mike
