Description

Kind of an edge case, but if layout theme names change between versions or due to development work, so there's a mismatch between the stored layout preference and the layouts listed in the files, then a blank screen is the result. The database needs to be edited directly to correct the problem (`tiki_preferences site_layout` updated to match available layout names).

There should be a fallback to a default layout ("basic") if the preference name isn't found, similar to how the site will fall back to the default theme if the selected theme or stored-preference theme isn't found.

Solution

r58795 ?

Fix Confirmed, Jonny. Thanks!

If not a real blocker, pretty similar, after this change:

<https://sourceforge.net/p/tikiwiki/code/57806>

I raised importance and tagged as regression (between 15.x revisions)
