Description
Update email in mail notifications list when email replaced in user account

I did change my email in my account settings at t.o. That email was transfered to dev.t.o properly.
And my mail notifications in t.o where updated properly. However, the mail notifications in the slave sites (from the same intertiki network) did not get updated

Workaround

Place adminer.php (<190Kb) in your slave tiki server (dev.t.o in this case),

```
wget https://www.adminer.org/static/download/4.2.4/adminer-4.2.4-mysql-en.php
```

and replace your email by hand in the tiki_user_watches table, with an SQL command such as:

```
update tiki_user_watches set email = replace(email, 'email1@example.com',
'email2@anotherexample.com');
```

Done. (hundreds of rows updated in a single go! uff, finally!)

Hi Xavi,
nothing to contribute but a good spot from you!
Afaik the eMail would be updated only when a user logs in after changing on the master (does it?).
But for eMail notification it indeed must be updated independantly from that.

So we needed some check if intertiki is active » check if user exists on the various slaves » change eMail

Right? Is that existing but broken or is it a missing functionality?

Xavier de Pedro 30 May 16 08:29 GMT-0000

no idea, torsten. As end user, I just noticed that "it didn't work". And I maanged to solve my problem "by hand" (sql command directly there: shorter and safer than attempting to add some code if I seem to be the only afected by hundreds of notif. emails to be replaced)

If this annoys other people, the sql command to replace seems to be simple (copied in the body of the report), and a new tool for admins could be added, I reckon, to run that for their affeceted users, if that is the case in other intertiki setups out there different than in *.t.o
