Description

On a blog post page, there are two chevron icons to display a dropdown list. One of them, "Blog actions", opens when the mouse hovers over it. The other one, "Blog post actions", doesn't open when the mouse hovers - it needs a click. These are very close together on the page, so the inconsistent behavior is especially obvious. But throughout the site the dropdown behavior should be the same, right? - either hover or click. Is this possible?
