Description

Blue Alert box after saving a tiki page stays on top of "Wiki top line location" when it's on the top position , making it difficult to close the alert. Its because the alert div is rendered after the top line, and they stack. (lack of a clear property?)

I use this custom JS to make it work: `$('#col1 > .pull-right').insertAfter('#col1 > .alert.alert-info.alert-dismissible');`

Tested in a trunk show instance, and everything seems right. Maybe it has been fixed in the trunk? Can we make it to te 15.x?

Show instance: <http://fvtorres-11800-5973.show.tikiwiki.org>

User: admin

Pass: 12345

Thanks

## Solution

In svn commit 58782 I removed the right-floated div that was causing the overlap with alert messages. "Simplified layout template by removing div.pull-right from around block.quicknav to prevent overlaps caused by uncontained/clearfixed floated wiki topline icons, etc. Sites or themes that need the previous behavior (float the icons and deal with overlaps) can add a "float:right" to div.wikiactions\_wrapper."

## Comments

**Gary Cunningham-Lee** 04 Jun 16 07:28 GMT-0000

Just for background info, this happens when the h1.pagetitle isn't being used. If the h1 is used, it goes full-width and prevents the overlap. (But in that case there can be another problem if the h1 has a background color or image - then the background is overlapped by the wiki top line; the icons are functional but it looks bad.)

There used to be a clearfix class div around the topline, but somebody removed it so the h1 and other content would rise up to be in line with the wiki top line, to save vertical space. It does make the pagetop more compact, but introduced some overlap problems.

**Fernando Torres** 04 Jun 16 08:48 GMT-0000

Hy Gary, thanks for the help!

I have one suggestion that would solve the problem, and continue to

be compact for who uses de h1.Would be to alter the order things are rendered.

At the present moment we render in this order:

<Top line menu floated right>

<Blue Alert BOX >

<Wiki content with H1>

If we change to:

<Blue Alert BOX>

<Top line menu floated right>

<Wiki content with H1>

(this way the top line menu will continue to stay in the top wiki line, but below the blue alert box.)

Not sure, but I think someone already made this on the trunk.

Thanks!

**Gary Cunningham-Lee** 04 Jun 16 09:44 GMT-0000

The layout\_view.tpl file already has things in this order:

```
{error_report}
{block name=quicknav}{/block}
{block name=title}{/block}
{block name=navigation}{/block}
{block name=content}{/block}
```

which resulted in the overlap. I hope the change I submitted solves the problem (at the cost of a little increase in white space).

Trunk has different code for a new "feedback" feature and the overlap doesn't happen.

**Fernando Torres** 05 Jun 16 07:08 GMT-0000

Strange, because in the sourcecode of the page it shows the wrong order. Take a look:

I used this custom JS to fix it (It just change the order of things, to what was expected, and it worked fine):

```
$('#coll > .pull-right').insertAfter('#coll >
.alert.alert-info.alert-dismissible');
```

What could make the order be different from the template?

**Fernando Torres** 06 Jun 16 20:24 GMT-0000

Just noticed, the blue alert box is not the {error\_report}. It's another div, that appears after the {block name=quicknav}{/block} (You can see in the screenshot I posted before. That's why it was not working.

**Gary Cunningham-Lee** 07 Jun 16 01:05 GMT-0000

I'm not sure why this bug was opened again. In the show instance, there isn't any overlapping. The overlapping resulted from the wiki topline icons being floated right but not inside a containing clearfix div. That's fixed now.

**Fernando Torres** 07 Jun 16 23:38 GMT-0000

Sorry Gary, reopened this bug because I thought there could be a better way to fix it, allowing to keep the float right property, and stacking with the title, saving up space. As I explained in the above comments, even though the {error\_report} comes first in the template, the blue dialog box is not coming from that entry. If you see the screenshot I posted, there is the Error\_Report div where it should belong, and the blue dialog div is between the content and topline menu, that way causing the bug. I'm using a JS to fix it,

```
$('#coll > .pull-right').insertAfter('#coll >
.alert.alert-info.alert-dismissible');
```

, that was working fine, because it changes the order of the elements, vanishing with the bug.

I don't have commit access yet, but as soon as I get it, I'll try to fix this.

Thank you

**Gary Cunningham-Lee** 09 Jun 16 08:50

## GMT-0000

I see. In my opinion, it's best for the floated element to be contained in a clearfix div, just to avoid the possibility of conflicts like with full-width pagetitle backgrounds and so on. Also we never know what the wiki content is going to be and what might conflict. But it's fine with me if there's another solution that can be tested and found to be better in the various situations.
