## Comments

signal3 07 Jun 16 17:45 GMT-0000

seems I can work around this w/ something like:

□□□□□□

```
templates$ diff comment-body.tpl* 75d74 < {if $prefs.feature_forum_parse eq 'y'} 77,79d75 <
{else} < {$comment.data} < {/if}
```

Of course such a simple patch will probably not interact well w/ comments outside forums.... but since time is short I'll choose my poison here. Tiki devs may want to put some extra time in to "get it right(tm)" across the board.

signal3 07 Jun 16 20:49 GMT-0000

I've investigated further since using `$comment.data` in the template probably exposes security issues w.r.t. x-site script attack and rendering unpurified html etc and have found that line 2033 in `commentlib.php` is the more deeply rooted culprit and should probably be changed from the existing:

```
if (($prefs['feature_forum_parse'] == 'y' && $section == 'forums') || $prefs['section_comments_parse']
== 'y') {
```

to something more like:

```
if (($prefs['feature_forum_parse'] == 'y' && $section == 'forums') || ($prefs['section_comments_parse']
== 'y' && $section != 'forums')) {
```

signal3 07 Jun 16 20:53 GMT-0000

Lol, of course the tiki markup in comments has screwed up my prior comment illustrating exactly why I don't want tiki markup in comments... oh what perfect irony!

LMFAO

Jonny Bradley 08 Jun 16 09:43 GMT-0000

Excuse me editing you, but i added `~np~` tags around the code, or you could have used CODE plugins 😊

Sorry, no time to look at this now, if your patch works please commit it in trunk just to test it and then backport it to the stable branch if it checks out. Pop along to IRC to get commit access if you don't have it already, thanks! 🍷

signal3 10 Jun 16 04:18 GMT-0000

Thanks, no worries! I also had tried to edit my own comment to add ~np~ tags but made the unfortunate mistake of attempting to preview said edit 😞 Maybe I'll file another wish regarding \*that\* too.
