Description

Was doing some tests with JQuery, and found out that any category field will have an extra pair of brackets after the FieldId → ins_341[]

Run into some trouble to use it.

The other tracker fields will just end up in the number. This might be a problem to somepeople, speccially by using plugins that will target it, like trackertoggle.

Tried to look in the plugin php to see where this is generated but couldn` t find it.

Below is the complete code for field 15 (category field) I used in a test tracker

□□□□□□

```
<select name="ins_15[]" class="form-control" aria-invalid="false"> <option value=""></option> <option value="1">A</option> <option value="2">B</option> </select>
```

Thanks
