Description

After changing admin pass in a brand new Tiki install the user is sent to example.com/Homepage even if the preference was not enabled by default, and the server didn't support it, like in the case of show.t.o.

This can produce the awful impression that Tiki is broken just in your first trial/test in a server.

Solution

Xavier, this issue seems to have been solved as part of r58803 by jonnybradley, can you please re-test? With both 15 and trunk when I set the admin password I'm not going to SEF Homepage any more.

I trust you rjsmelo, closing as "outdated" (sorry I don't have time to retest, and since you said it was working for you, this is good enough for me 😊) thks
