Description
Favorite is not working.
On my Tiki15x I got an error in red at the top of the page.
~~On the instance I got nothing and it is nowhere to be found.~~

There is no doc about the exact location where I should see my user favorite.

Please retest with latest 15.x. Also if it is still present in 16.x or trunk would be good to know...

Hi Lu,

You have an idea of how this feature is supposed to work ? 😃

Yes,
on top right under Page actions dropdown there you can select a page to be your favorite. Then you need to put LIST plugin somewhere to list the user favorite objects (e.g. the wiki pages) - it has no dedicated UI in Tiki to list them afaik.

Thanks to your lead it work now on the instance.
I will update the docs.
