Description

In the toc we can set maxdepth (how many sub-level) we wan to display.

However there are case you need only sub-level to be displayed.

A structure *Europe* with several children (*France, England, etc*) that have them self (*Paris, London, etc*) children.

Europe (top level)

-> *France* (sub-level 1)

-> *Paris* (sub-level 2)

-> *England* (sub-level 1)

-> *London* (sub-level 2)

Using the `wikiplugin_toc` we want to show all the second child (sub-level 2) for all the structure *Europe* and not any of the level above it.

The toc will show:

Paris (level 2)

London (level 2)

Workaround

Fixed with commit 59681
