Description

This profile [https://profiles.tiki.org/Bug\\_Tracker\\_15](https://profiles.tiki.org/Bug_Tracker_15) makes an attempt to allow the user to set the sender\_email if they haven't done so yet (which is usually the case when we are creating new show.t.o instances, or reproducing some scenario in localhost to debug some feature, etc.)

I'm using the same type of syntax which seems to be working in other profiles:

But this one in Bug\_Tracker\_15 profile seems not to work:

```
sender_email: $profilerequest:sender_email$YourEmail@example.com$
```

while these other ones, in [Easy GeoBlog](#), for instance, work as expected:

```
style: $profilerequest:style$gradiant.css$
sitetitle: $profilerequest:sitetitle$My Easy GeoBlog$
sitesubtitle: $profilerequest:sitesubtitle$My thoughts and musings$
browsertitle: $profilerequest:browsertitle$Easy GeoBlog$
```

I tried if the issue was adding an "@" character in the working fields of Easy Geoblog, but that worked as expected also even if an email was written there.

Hi Xavi,

what do you mean it "does not work". Fatal error? Profile not applied? The input field does not appear? Anything else?

Can you test with simple profile containing only the following code?

**YAML**

preferences:

```
sender_email: $profilerequest:sender_email$YourEmail@example.com$
```
