Applying Profile thinks line with #foo selector in CSS code is a comment and omits it

Description
When there is a CSS code in the profile params containing lines with ID selectors applying profile just ignores those lines resulting in wrong CSS code. For example:

#foo,
.bar,
.bar-bar { display: block
}

will result in:
Example of the profile YAML:

```yaml
objects:
  -
    type: module
    data:
      name: Custom Style
      params:
        nobox: y
        groups:
          order: 1
          position: top
      custom: |
        {literal}
        <style type="text/css">
        #whitehead,
        .bgwhite {
        background-color: #fff
        }
        </style>
        {/literal}
    parse: n
```

Saving this as `myprofiles/custom-style.yml` and applying this profile using `php console.php profile:apply custom-style myprofiles` will result in custom module creation named "Custom Style" but there will be no line with `#whitehead`, in it, just the `.bgwhite` class declaration.

Importance
10 high

Maybe our parser needs updating, your example seems to come out fine on this tester: http://yaml-online-parser.appspot.com

Thanks Jonny, you are right! Handy link BTW ;)

luciash d' being ♂ 05 Dec 16 14:00 GMT-0000

For now I will do a workaround compacting the CSS to one line to avoid lines starting with #.
