Description
When there is a CSS code in the profile params containing lines with ID selectors applying profile just ignores those lines resulting in wrong CSS code. For example:

#foo, .bar, .bar-bar { display: block }

will result in:

.bar, .bar-bar { display: block }

Example of the profile YAML:

YAML

objects: - type: module data: name: Custom Style params: nobox: y groups: order: 1 position: top custom: | {literal} <style type="text/css"> #whitehead, .bgwhite { background-color: #fff } </style> {/literal} parse: n

Saving this as `myprofiles/custom-style.yml` and applying this profile using `php console.php profile:apply custom-style myprofiles` will result in custom module creation named "Custom

Style" but there will be no line with `#whitehead,` in it, just the .bgwhite class declaration.

Maybe our parser needs updating, your example seems to come out fine on this tester:
http://yaml-online-parser.appspot.com

Thanks Jonny, you are right! Handy link BTW ;)

luciash d' being □ 05 Dec 16 14:00 GMT-0000

For now I will do a workaround compacting the CSS to one line to avoid lines starting with #.
