★★★★★ (0) ?

Wiki page title

```
> pageSlug test 2byte x 30 = 60byte
```

> 1)

> 1) is bad, Error 400 when save page, and 403 when view page.

because encoded pageSlug is not same as url when tiki makes page URL.
so when same, there is no place to where to store db.
also when view, pageSlug is broken.

workaround

1) short tile

2) varchar(160) to 255 (but stile same problem when title is long)

fix

only way is direct DB edit

more .. later
