Description
Feature to discuss wiki pages in forums sends a notification email (user watches) each time the use clicks at the button 'Start discussion' (even if the discussion and thread was already started by someone else previously)

Reproduced:

http://xavi-9794-6188.show.tikiwiki.org/tiki-index.php?page=HomePage
u: admin
p: 12345

u: user1
p: user1

Mail sending is logged in the syslogs

Login as user1 and click at access discussion of the homepage (link above bottom bar). Registered users (through group watches) will receive an email as if you started the thread. But thread was started already, and you didn't post anything else to trigger a new email sent.
