Description
    forums in t.o unusable: help!

    I tried to reply to this forum post https://tiki.org/forumthread62480 with my user "xavi" adding this
    content:

    ❝

        Hi enelson and welcome to the Tiki Community
        Have a look at the authentication methods available in Tiki:
        https://doc.tiki.org/Login+Config

        and external authentication:
        https://doc.tiki.org/External+Authentication

        If the main CMS was Tiki, you also configure same login through several methods tested and
        working elsewhere (Intertiki, among others). What does composr offer that you can't get in
        Tiki? (just curious)

The post is not saved. I tried 3 times. No way.

Clicking at the top at the link to "prev topic" produces this url:
https://tiki.org/tiki-view_forum_thread.php?comments_parentId=62487&topics_offset=-1

which returns this error message on a semi-WSOD page:

⬓

> Error Notice: invalid variable value: $_GET["topics_offset"] = -1

I tried then to go to the list of forums through the usual SEF url:
https://tiki.org/forums

but that is re-sent to the tiki home page with the blueish perspective
https://tiki.org/tiki-index.php

I'm looking for an alternative way to simply go to the forums list in tiki.org and I can't find it anywhere in the blueish perspective. I presume that this is related to some bad configuration or bugs with perspectives. But I can't confirm, and I can't change them any more as simple user in tiki.org.
Shouldn't we expose the main app menu somewhere (at the bottom, at least) for registered users???

Helo Xavi,

I just found your report. I did shut off the forums at all for Info and Suite.

Please check if the missbehaviour the connection with Perspectives are both still valid or either one of it.

Regards,
Torsten

Just reviewed this bug report...
The `Notice: invalid variable value: $_GET["topics_offset"] = -1` issue is still there when you use the prev topic link:
https://tiki.org/tiki-view_forum_thread.php?comments_parentId=62487&topics_offset=-1 😕

The perspective switching seems to be fixed though...

luci

I just posted in the forum it is ok.

The other error is still here:

Error Notice: invalid variable value: $_GET["topics_offset"] = -1

May be you could change the title of this ticket (or close one and add one).

Fabio Montefuscolo 05 Nov 20 17:03 GMT-0000

I can't reproduce it on a local tiki instance, using commit r77484 (4b4ecd8db6418a2c8105)

We do have the error `Notice: invalid variable value` ... but the <Previous topic link does not show the wrong link as shown on tiki.org and next.tiki.org. So, the error is a valid thing do display in case of someone manually input `&topics_offset=-1`. Should it be closed?

Well, I don't have access to tiki.org and next.tiki.org servers to check the version available there. May be we should update that there.
