Description

Enabling the prefrence 'WikiLingo' causes a fatal error on tiki-index.php

```
lib/wiki/wikilib.php
```

```
$scripts = self::$wikiLingoScripts = new WikiLingo\Utilities\Scripts(TikiLib::tikiUrl() .  
"vendor/wikilingo/wikilingo/");
```

There is no wikilingo vendors package.

I was trying to merge some of the uses of zeroClipboard while I came across this. Its one of the features that uses zeroClipboard linked (currently) to our lib folder.

This is an experimental feature that causes Tiki to Crash. There is also very little documentation on how to use it in tiki.

IMO this is an abandoned feature, I put it as candidate for removal for Tiki17.

drsassafras 24 Jan 17 03:52 GMT-0000

+1 Unless the original authors want to fix it up. I also spotted several js issues that would prevent it from working properly even if this one issue was fixed, so it looks like it needs a real overhaul to work properly.
