Description
Hello,
We have upgraded Tikiwiki 12.6 to 12.11 and we are using CAS authentication for managing user
access, but still want to keep user validation after registration. I was able to validate users in
tiki12.6/12.5 but that is broken in tiki 12.11(LTS) and no error is reported, and there is a message
that states "Account validated successfully. "
Please help

Thank you
