Description

Tried on 12, 15, 16 and 17 to create a plugin alias based on : <https://doc.tiki.org/Plugin+Alias>

Work only in 12x.

I created an instance.

Solution

In 17.x r62372

Comments

luciash d' being 18 Apr 17 12:51 GMT-0000

I confirm on the trunk show instance it is not creating new PluginAlias 😞 But it worked I am pretty sure in 15.x at some point I tried with simple ROW alias of the DIV class="row" plugin... so must become broken sometime in between 15.0 release and latest 15.x ?

luciash d' being 01 May 17 19:26 GMT-0000

Thanks Jonny. SVN upped the show instance and I could create foo plugin alias now. Well done!

Bernard Sfez / Tiki Specialist 02 May 17 05:11 GMT-0000

Thanks Jonny works now.

Was it backported ? (15x... may be 16x ?)

Jonny Bradley 02 May 17 11:22 GMT-0000

Not backported yet, it's r62372 if you need it there (has to be 16 before 15 obviously)
There are some other GUI fixes needed i wanted to try and do first... :P

Bernard Sfez / Tiki Specialist 03 May 17 13:56 GMT-0000

I'm with you all the way ;)

Bernard Sfez / Tiki Specialist 02 May 17 05:37 GMT-0000

By the way, if you look at : http://bsfez-11581-6322.show.tikiwiki.org/tiki-list_trackers.php the action menu is broken.

I couldn't reproduce in local. Hope it is the same for you...

Jonny Bradley 02 May 17 11:25 GMT-0000

That's trunk isn't it? Sounds like there's been a regression (i'm only on 17 at the moment)
