Description

When the fullscreen feature is available but not on, and I make the wiki edit screen fullscreen (using toolbar icon), the side-column toggle icons continue to display, inappropriately. They are visible in their normal positions (when side columns are active) even though the edit screen is already fullscreen.

Their should be a check to not show these icons when the wiki editor is fullscreen. (Checking with the DOM inspector, I see the normal Tiki columns are still in place "under" the fullscreen editor, but their content doesn't display. The side-column icons are the exception. So it's kind of like a z-index problem but I don't see what z-index properties are involved, if they are.)
