### Description

memory exhausted (even if 1Gb allocated to php processes!) after uploading big pdf (20Mb with images) to file gallery and tiki works server side with pdftotext and others.

Untested in other versions of Tiki.

It might very well be a problem with pdftotext, because the file uploads to the server fine, and the server processes the file with pdftotext after that, before showing the error message. Apache error log says memory exhausted.

Maybe this php library might help to have more control over the process to extract text from a big pdf file?

<http://www.pdfotext.eu/>

<https://github.com/christian-vigh-phpclasses/PdfToText>

(lgpl'd, btw)
